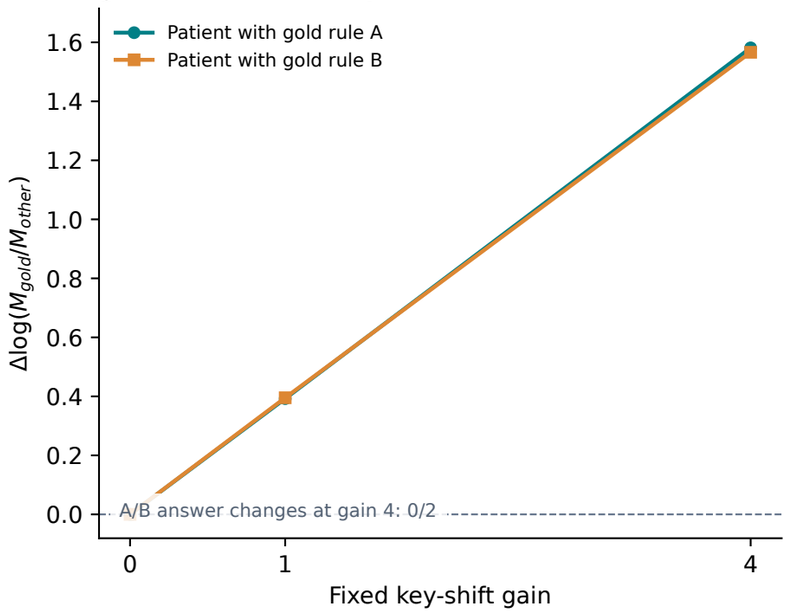
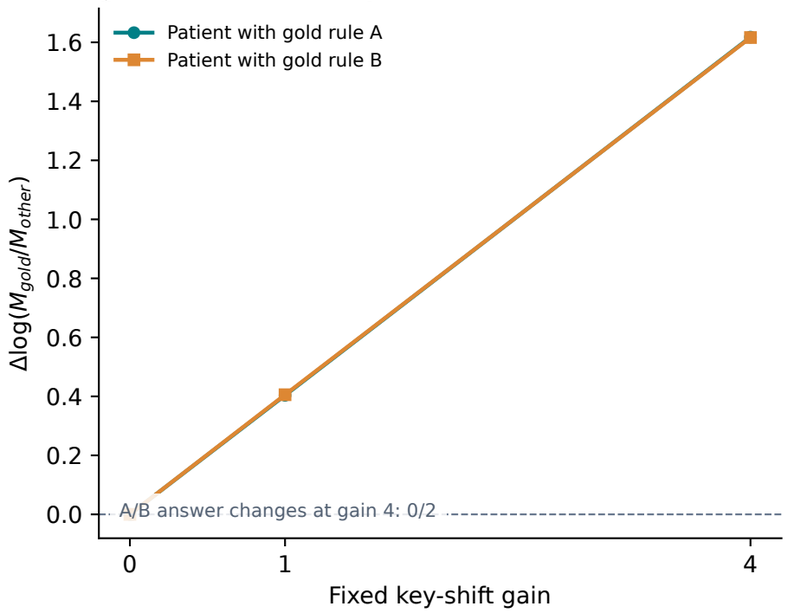
Module 2 · Controlled reading in the actual prefix-cache protocol

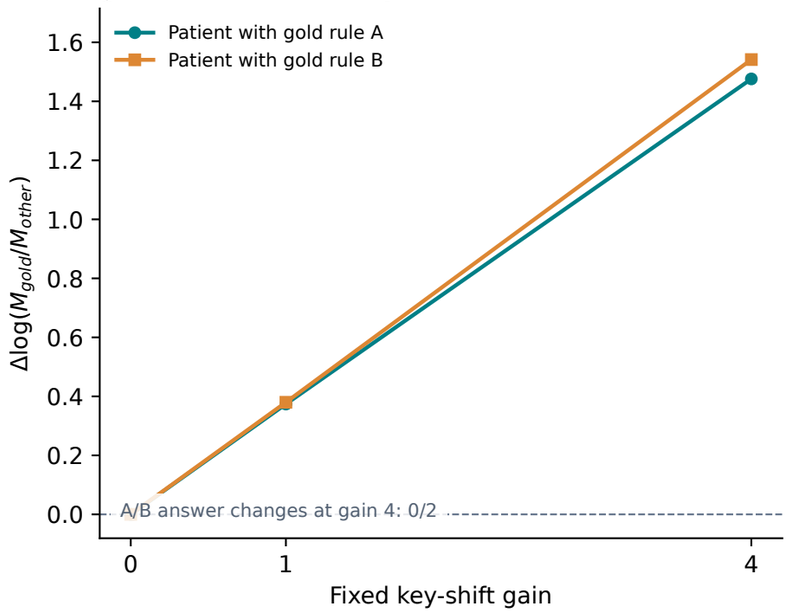
A Typical successful pair
guideline:636 · swap0 · order1



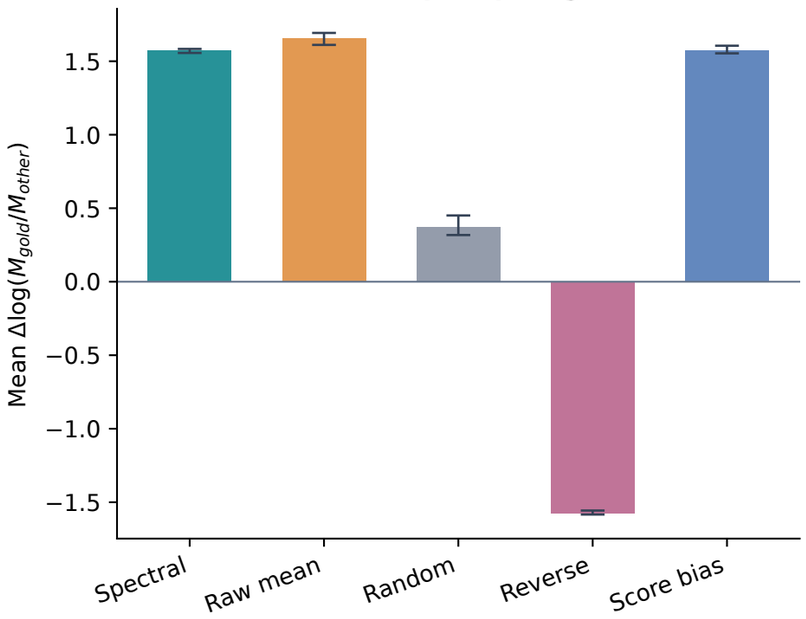
B Strong successful pair
guideline:636 · swap1 · order1



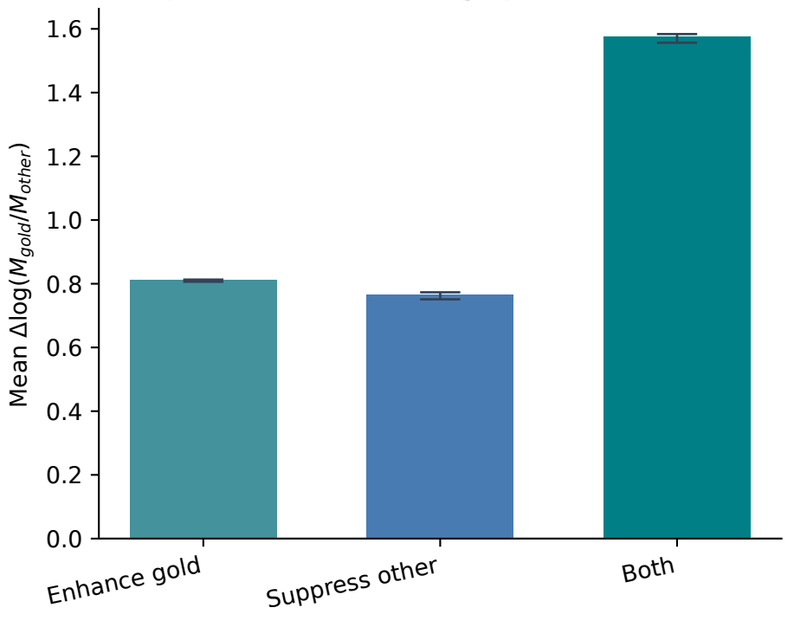
C Weakest remaining pair
guideline:1517 · swap0 · order0



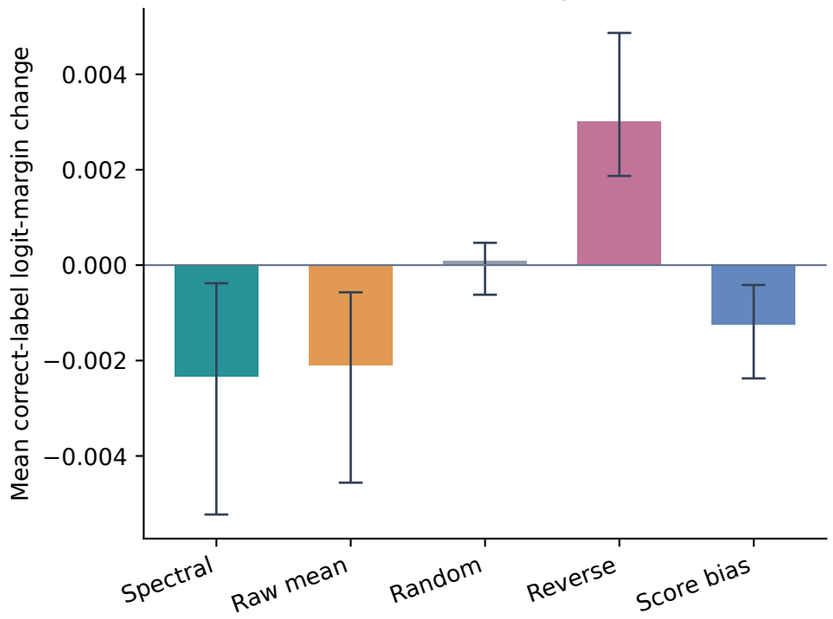
D All 24 confirmation prompts · gain 4



E Separate the two routing operations



F Decision readout · secondary endpoint



Top: transparently selected illustrative pairs (12/12 pairs improve the mass ratio for both opposite patients).
Bottom: all 24 prompts / 12 paired configurations / 3 guides; intervals resample guides. Masses average selected KV heads and their shared queries.
Oracle routing signs · simultaneous selected-head editing · fixed unit-key gains. Score-bias calibration is fixed on selection data, not matched per confirmation example.
