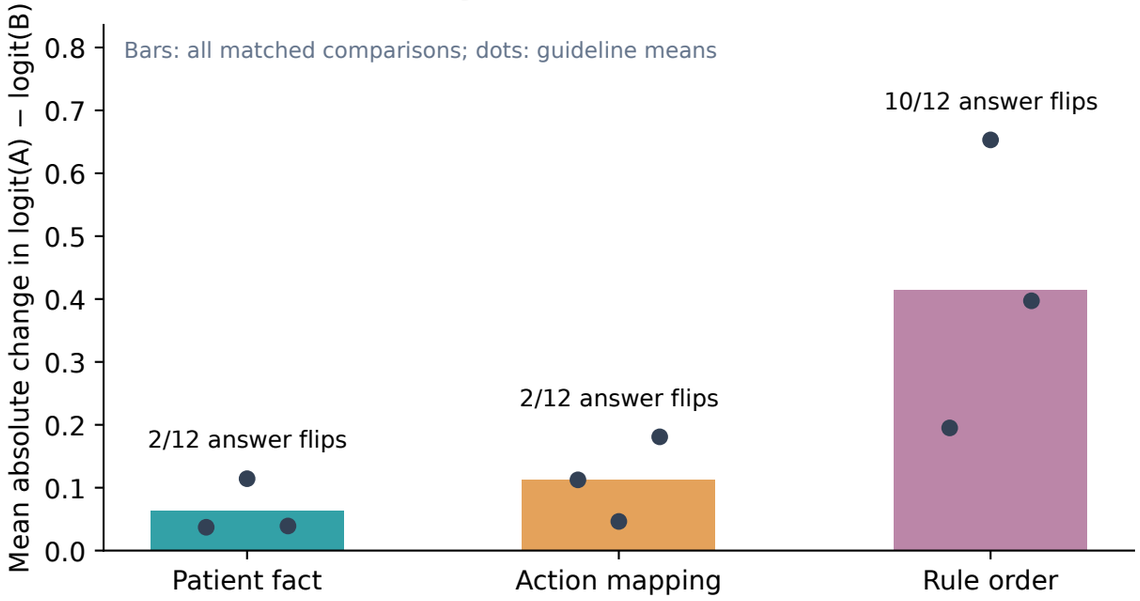
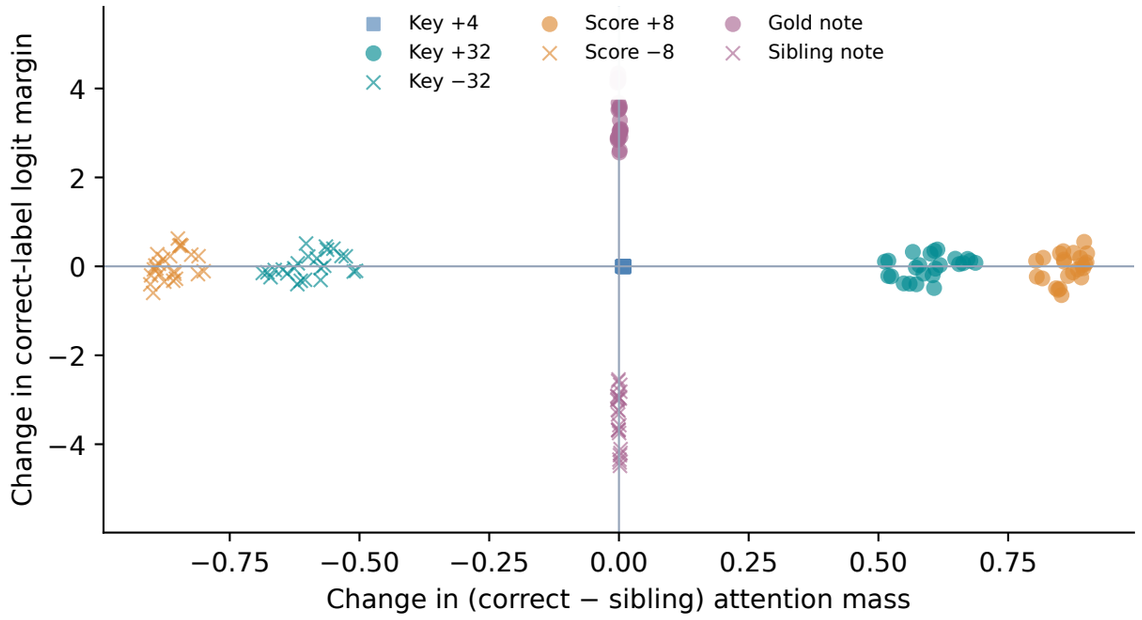
Rule reading and answer readout · Fixed follow-up diagnostics

All 24 fixed prompts · 12 paired configurations · 3 confirmation guidelines

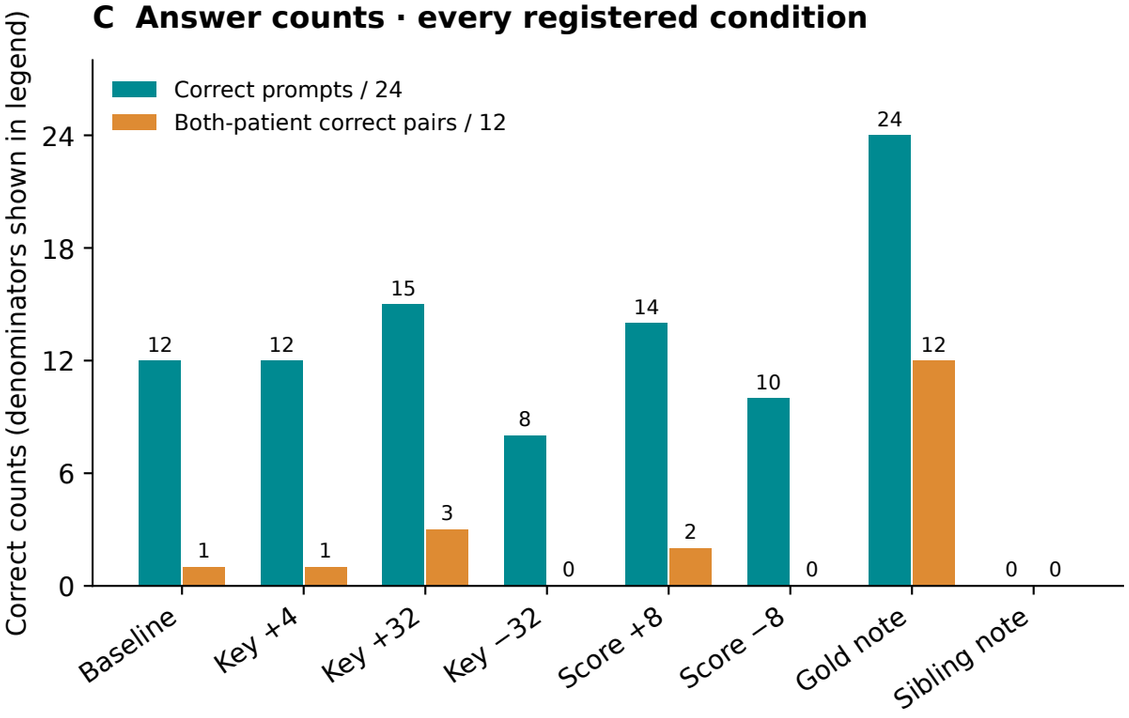
A Baseline sensitivity · last rule chosen 22/24



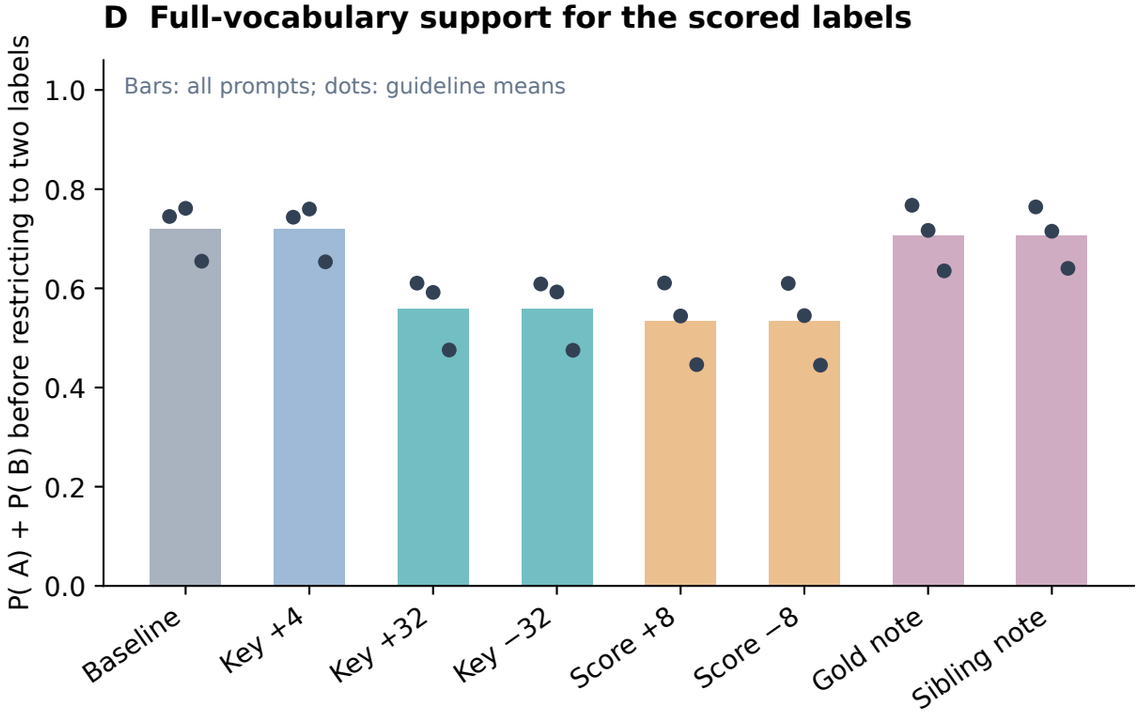
B Local reading change versus answer change



C Answer counts · every registered condition



D Full-vocabulary support for the scored labels



Markers in B show every prompt, not selected examples. Crosses reverse the key/score sign or give the sibling note.
Fixed frozen directions and four heads · oracle routing signs · all gains and notes registered before this follow-up.
Strong internal-edit flips across four conditions: A→B 27; B→A 0. This does not establish two-way answer routing.
Three source guidelines; controlled text variants are not independent clinical patients. No population confidence claim.
