Qwen3-0.6B-Base | Applicability key diagnostics

12 development guidelines: 6 fitting / 3 selection / 3 confirmation

Keys are means over each action span after key normalization and before RoPE; A is not a per-token distance.

Gray B cells: zero fitted shift, so the strict-sign fraction has no directional interpretation. Read still shows zero response.

All layer / KV-head cells are shown. Black outlines: 4 heads accepted by selection screens.

Exploratory representation measurements; signed Read is a local score response, not decision accuracy.
