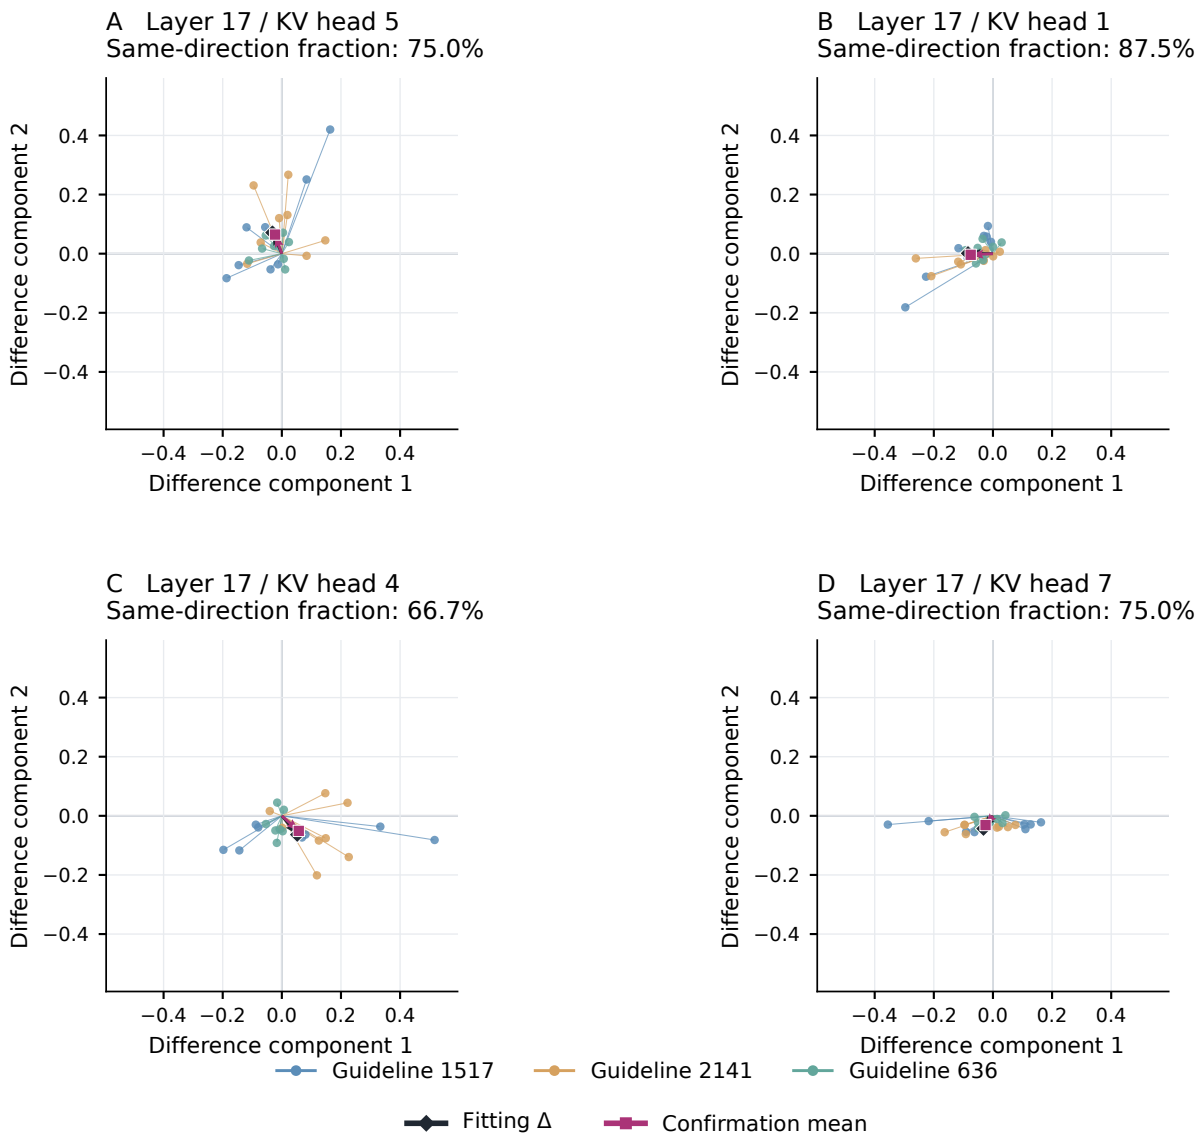
Qwen3-0.6B-Base | Paired difference vectors

All screen-accepted heads in frozen training-difference coordinates

24 paired comparisons / 3 confirmation guidelines; complete counterbalancing retained



Each colored arrow is one confirmation pair, from zero to the projected applicable-minus-inapplicable key difference.

Black: fitted shift. Purple: guideline-weighted confirmation mean. Common true scale and equal aspect; no arrow magnification.

Axes are head-specific and fitted only on fitting guidelines. Same-direction fractions use the full fitted shift.
